

DEVELOP A WEB APPLICATION USING NODE-RED SERVICE

Web application using node-red

TEAM ID	PNT2022TMID36134
PROJECT NAME	Smart Waste managmentssystem for metropolitan cities

Web application using node red

Node-RED interface showing a flow diagram and the 'Edit function node' configuration.

Flow Diagram: The flow starts with an 'IBM IoT' node, which connects to a 'format in' node, followed by an 'OpenWhisk' node, and finally a 'format out' node.

Edit function node configuration:

- Name:** temp
- Setup:** On Start, On Message, On Stop
- Code:**

```
1 msg.payload = msg.payload.temp;
2 return msg;
```

Debug Console: The debug console is empty, showing no messages.

System Information: The bottom status bar shows the system is running on Windows, with a temperature of 25°C, partly sunny weather, and the date 18-11-2022.
